Society 2023-24

TOPIC -

FAITH AS SEED OF SCIENCE

The ongoing discourse surrounding the relationship between science and religion has captivated human thought for centuries. These two realms of human understandings, while fundamentally distinct in their methods and objectives. Science deals with the application of knowledge and understand the natural world through various experimentations and theories and find the proof of that experimental works whereas religion deals with the spiritual mysteries of life, the belief in and worship of superhuman powers, especially Gods. But, as long as science and religion continue to support and inspire people, it can lead to complex and nuanced

FAITH AS SEED OF SCIENCE

66 SCIENCE adjusts its views based on what's observed.

FAITH is the denial of observation so that belief can be preserved. ☺☺ - Tim Minchin

In a life, devoted to understand the mysteries of the universe, great scientists had faith in their belief of discovering the answer to these questions

All the scientific discoveries would not have been brought to light, if these scientists would have lost faith in their process of invention

Science is all about creative thinking and questioning, the answer to these questions lies in the discovery of something. Discoveries requires devotion, interest, planning, creative imagination and testing. It is a long journey full of ups and downs, therefore the role of faith becomes important here.
