

TRENDS IN MICROBIOLOGY

April- June 2023

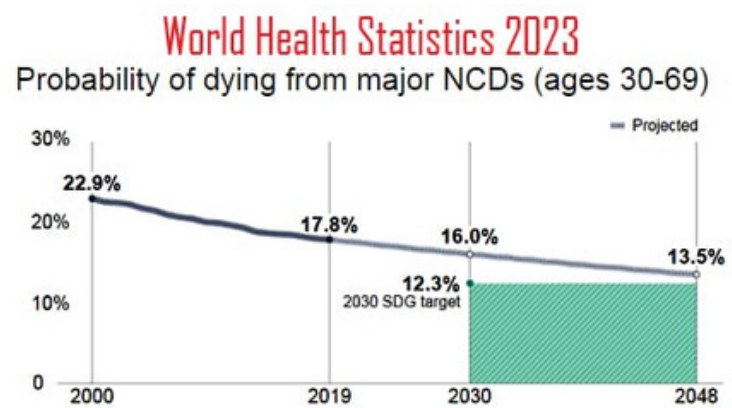

"HEALTH FOR ALL"

World Health Day aims to raise awareness about global health issues, promote health equity by addressing disparities, encourage collaboration among stakeholders, and highlight progress in improving health outcomes worldwide. This includes educating people on the importance of good health, providing access to healthcare services, and reducing the burden of diseases in disadvantaged communities and low- and middle-income countries.

The adoption of Health For All by government, implies a commitment to promote the advancement of all citizens on a broad front of development and a resolution to encourage the individual citizen to achieve a higher quality of life.

World Health Day (WHD), held every year on 7 April, marks the anniversary of the founding of the World Health Organization (WHO) in 1948
