The crosslinking solution was prepared by dissolving 1gm of calcium chloride in 3ml. ethylalcohol (absolute) solution. The crosslinking solution was added drop wise added in to the aqueous phase of curcun solution in continuous stirring by magnetic stirrer (3000 rpm) at room temperature for 3h. The crosslinking reaction was completed in 3h. The prepared nanoparticles were separated from the liquid medium by washing thrice with toluene and twice with acetone solvents. The dried particles were stored at room temperature.
